

THE INHALER

SOFFIT INTAKE VENT

Great for homes with little or no overhang!

Drip Edge & Soffit Venting In One Application

Many homes are designed with little or no overhangs.

This presents a challenge in providing the necessary intake ventilation required to properly and adequately vent attics.

THE INHALER answers the ventilation challenge -allowing air to flow through its concealed baffle, hidden behind the drip edge.

THE INHALER allows the architectural pleasing design of the home to remain intact, while providing the necessary intake ventilation.

THE INHALER

SOFFIT INTAKE VENT

- Two products in one: Drip Edge & Soffit Intake Vent.
- The Drip Edge is made of high quality PVC vinyl and the vent baffle of polypropylene which provides a quality product with superior strength to aluminum and other products.

COMBINES THE DRIP EDGE AND SOFFIT INTAKE VENT INTO ONE APPLICATION!

- Convenient 5 foot lengths are easy to install providing 5 inch coverage on the roof deck and 4 inch coverage to the fascia board.
- 7½ square inches of venting per L.F.
- Install on 3/12 to 12/12 roof pitch.
- Each length has an integrated overlap for fast secure installation.
- Install with or without gutters. THE INHALER does not worry about ice backup in the gutter.
